EXPERIENCE

2020-2025

SLB

Senior Project Engineer – Data Centers, June 2025 - Present

Houston, TX

- Built a centralized product database and introduced structured kitting, reducing supply chain workload and cutting production delays by 15%.
- Established design standards and standardized documentation to support hyper-scaling, increasing production capacity by 20% across cross functional teams.
- Mentored 10-15 engineers on technical design and problem solving, accelerating new hire onboarding and improving team productivity.
- Developed automation tools (Python, Visual Basic) for bills of material generation, reporting, and data entry, adopted across the business line, reducing manual labor by 40% and improving data accuracy.
- Resolved nonconformance reports, clarified technical requirements, and troubleshoot manufacturing and field issues to preserve schedule and meet or exceed quality standards.

Senior Control Systems Mechanical Engineer, 2023-2025

Houston, TX

- Led end to end control system design and delivery, including functional design specifications, drawings, P&IDs, 3D models, and test procedures while coordinating with supply chain, manufacturing, and quality.
- Managed compliance to industry standards (API, ABS, DNV, ASME, CE) by tracking requirements and implementing specifications into the design and validation.
- Conducted technical risk assessments (failure modes, effects and criticality analysis, hazard identification) to mitigate safety and design risks, reducing late-stage design changes by 15%.
- Owned technology qualification and commercialization for \$7M, leading proposals, client presentations, and prototype to production transition.
- Served as primary technical contact for vendors and clients, leading design reviews, resolving nonconformance reports, and addressing deviations to keep projects on scope, schedule, and quality.

Rotational Engineer, 2020-2022

Houston, TX

Completed an engineering development program with rotations in automation, product development, quality, and manufacturing. Highlights include:

- Developed PLC/HMI control systems to API 16D and supported CE compliance testing.
- Contributed to commercialization of a remote access gateway (\$1.4M revenue impact).
- Automated inspection and supplier quality processes, reducing cycle times by 40%.

EDUCATION

University of Michigan

Ann Arbor, MI

College of Engineering

Bachelor of Science in Engineering, May 2020

- Minor in Computer Science

PROJECTS

Automated Quantitative Trading Application

- Designed and implemented a machine learning–driven stock trading system with predictive, feature engineering, and hyperparameter tuning.
- Integrated with brokerage APIs for automated execution, and built backtesting frameworks to validate strategies.

SKILLS

Systems Engineering | Product Development | System Design | Stakeholder Engagement | Risk Mitigation | Cross-Functional Collaboration | Project Scheduling | Technology Qualification | Process Optimization | Automation | CAD | Inventor/SolidWorks | PowerBI | SAP | Manufacturing Operations | Vendor Management | Problem Solving | Hardware-Software Integration
