EXPERIENCE

2020-2025

SLB

Senior Project Engineer – Data Centers, June 2025 - Present

Houston, TX/USA

- Led process optimization projects to create a centralized product database and introduced structured kitting, decreasing the workload on supply chain and reducing production delays.
- Supported hyper-scaling efforts by establishing design standards, standardizing documentation and processes, and providing training to cross-functional teams to eliminate workflow bottlenecks, improve communication, and increase production capacity by 20%.
- Mentored 10-15 engineers, providing technical and career guidance, design input, and coaching to accelerate onboarding for new hires and improve team productivity.
- Developed and deployed data management systems and automation tools (Python/VBA) for BOM generation, reporting, and data entry, which were adopted across the business line, reducing manual labor and improving data accuracy.
- Provided support to clients, vendors, manufacturing, and field teams by resolving NCRs, clarifying technical requirements, and troubleshooting issues, to preserve project schedule and meet/exceed quality standards.

Senior Control Systems Mechanical Engineer, 2023-2025

Houston, TX/USA

- Led end to end control system design and delivery, including FDS, drawings, P&IDs, 3D models, and test procedures while coordinating with project management, supply chain, manufacturing, and quality to ensure performance and compliance.
- Managed requirements and industry standards (API, ABS, DNV, ASME, CE) by tracking and implementing specifications into the design, technical documentation, and validation.
- Conducted technical risk assessments (FMECA, HAZID) and worked with project management to mitigate technical and project risks, improving safety and reducing design changes.
- Owned technology qualification and supported business development and commercialization for \$7m product by contributing technical expertise to proposals, presenting solutions to clients, and bringing new technologies from prototype to production.
- Served as primary technical contact for vendors and clients, leading technical reviews, resolving NCRs, clarifications, and deviations to maintain trust and keep projects within scope, on schedule, and of high quality.

EDUCATION UNIVERSITY OF MICHIGAN Ann Arbor, MI

College of Engineering

Bachelor of Science in Engineering, May 2020

- Minor in Computer Science

ADDITIONAL Rotational Engineer | SLB | 2020–2022 Completed an engineering development program with rotations in automation, product development, quality, and manufacturing. Highlights include:

- Developed PLC/HMI control systems to API 16D and supported CE compliance testing.
- Contributed to commercialization of a remote access gateway (\$1.4M revenue impact).
- Automated inspection and supplier quality processes, reducing cycle times.

PROJECTS

Automated Quantitative Trading Application – Designed and implemented a machine learning–driven stock trading system. Built predictive models with feature engineering and hyperparameter tuning, integrated with brokerage APIs for automated execution, and developed back testing frameworks to validate strategies.

SKILLS

Product Development | System Design | Technical Program Management | Stakeholder Engagement | Risk Mitigation | Agile & Scrum | Cross-Functional Collaboration | Project Scheduling | Technology Qualification | Process Optimization | IoT & Automation | PowerBI | SAP | Manufacturing Operations | Vendor Management | Software Development
